Application/Control Number: 10/662,826

Art Unit: 2611

### **DETAILED ACTION**

### Specification

- 1. The disclosure is objected to because of the following informalities:
  - a. On page 12, line 7, reference number "610" should be "612."
  - b. On page 12, line 28, "carrier out" should be "carried out."

Appropriate correction is required.

### Claim Objections

- 2. Claims 1, 4 are objected to because of the following informalities:
  - a. Regarding claim 1, line 7, "ration" should be changed to "ratio."
  - b. Regarding claim 4, the term "e" should be properly defined.

    Appropriate correction is required.

## Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 13 recites the limitation "the scaling factor" in line 2. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 103

Application/Control Number: 10/662,826

Art Unit: 2611

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 4. Claims 1, 10, 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over US patent application 2004/014695 A1, in view of US patent 6,215, 814 and Asztely et al in "MLSE and Spatio-Temporal Interference Rejection Combining with Antenna Arrays."
  - a. Regarding claim 1, '695 describes a receiving method comprising receiving a signal with an array antenna comprising at least two antenna elements (figure 1, elements 3 and 4), oversampling the received signal (paragraph 0023), measuring the spatial and temporal color of the received oversampled signal (figure 1, element 6), combining the received signal using combined maximum ration combining (element 7) and space-time interference rejection combining (element 10, paragraph 0064), controlling the combining of the received signal on the basis of the

measurement results (figure 2). While '695 does not describe the interference rejection combining to be specifically space-time interference rejection combining, such a feature is well known in the art, see '814, column 11, lines 42-65 (see also <u>Asztely</u>, abstract). it would have been obvious to one ordinarily skilled in the art to use space-time interference rejection combining as the interference rejection combining technique in '695 in order to provide superior performance especially for multiple antenna receivers.

- b. Claim 10 reads on the limitations of claim 1 above.
- c. Claim 16 reads on the limitations of claim 1 above.

### Allowable Subject Matter

5. Claims 2-9, 11-15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jia W. Lu whose telephone number is 571-272-6042. The examiner can normally be reached on Mon- Fri, 8:30AM-4:30PM.

Art Unit: 2611

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chieh M. Fan can be reached on (571)272-3042. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
